

CAB MANAGEMENT SYSTEM

SOFTWARE REQUIREMENT SPECIFICATIONS

INTRODUCTION

Transport is an important part in our daily life. Human life is difficult without transportation and hence there are many companies that provides cab an other transportation services. The client usually contacts the company for getting the transportation services. The company then assigns the duty to a driver according to the user's requested time and date.

Online cab management services facilitates easy and effortless booking of a cab and helps to save a lot of quality time. The automated system provides the location of the user which makes it easy for the driver to reach the client. After the completion of the trip, the client can review and give feedbacks for the service.

PURPOSE

The purpose of the document is to collect and analyze all assorted ideas that have come up to define the system, it's requirements with respect to consumers. It is intended to be a complete specification of what functionality the system provides. The main purpose of the system is to automate the process of booking a taxi online. Specific design and implementation details will be specified in a future document.
